Summary

Full Stack Developer with experience in React, Django, and .NET. Dedicated to building scalable web applications and intuitive user interfaces.

Projects

Care-osa

AI-Assisted Student Violation Management & Good Moral Certificate Generation System. A secure, web-based platform bridging disciplinary records with certificate issuance for the Office of Student Affairs.

- Designed a secure, web-based disciplinary management platform using .NET Web API and Supabase, reducing manual record processing time by 40%
- Implemented an AI-assisted violation categorization system to automatically classify and log student disciplinary incidents
- Streamlined the Good Moral Certificate generation workflow, increasing issuance efficiency and serving over 100+ students per semester

LHN Beauty Studio

A professional business website for a beauty studio featuring service listings, a gallery of work, and contact information for client bookings.

- Developed a professional business website using PHP and MySQL, driving a 25% increase in online client bookings within the first three months
- Designed an interactive service gallery and booking interface with HTML, CSS, and JavaScript to enhance the browsing experience
- Optimized backend database queries, resulting in a 30% improvement in page load speeds and overall site performance

Singko CCS Survey System

A survey platform built to facilitate efficient data collection and feedback analysis.

- Assembled survey platform utilizing .NET Web API and MSSQL.
- Created a real-time analytics dashboard using PHP and JavaScript to visualize feedback and survey results
